

First-Class Airman Medical Certificate

§ 61.23 Medical certificates: Requirement and duration.

(d) **Duration of a medical certificate.** Use the following table to determine duration for each class of medical certificate:

<an airline transport pilot certificate>

- (i) **Under age 40: 12th month** after the month of the date of examination shown on the medical certificate.
- (ii) **Age 40 or older: 6th month** after the month of the date of examination shown on the medical certificate.

Subpart B—First-Class Airman Medical Certificate

§ 67.101 Eligibility.

To be eligible for a first-class airman medical certificate, and to remain eligible for a first-class airman medical certificate, a person must meet the requirements of this subpart.

§ 67.103 Eye.

Eye standards for a first-class airman medical certificate are:

- (a) Distant visual acuity of **20/20 or better** in each eye separately, **with or without corrective lenses**. If corrective lenses (spectacles or contact lenses) are necessary for 20/20 vision, the person may be eligible only on the condition that corrective lenses are worn while exercising the privileges of an airman certificate.

分数視力(fractional visual acuity)

欧米で用いられている方式で分子に検査距離、分母は視標の番号をとり表す方法がよく使われる 20 フィートでの検査距離では 20/20(小数視力 1.0)や 20/40(小数視力 0.5)のように表される。

※なお分母の視標の番号は小数視力 1.0 の人がその視標をかりうじて判別できる距離になっています。20/40 の場合は小数視力 1.0 の人は 40 フィートの距離からその視標を判別できる事になります。

(b) Near vision of 20/40 or better, Snellen equivalent, at 16 inches in each eye separately, with or without corrective lenses. If age 50 or older, near vision of 20/40 or better, Snellen equivalent, at both 16 inches and 32 inches in each eye separately, with or without corrective lenses.

(c) **Ability to perceive those colors necessary for the safe performance of airman duties.**

(d) Normal fields of vision.

(e) No acute or chronic pathological condition of either eye or adnexa that interferes with the proper function of an eye, that may reasonably be expected to progress to that degree, or that may reasonably be expected to be aggravated by flying.

(f) Bifoveal fixation and vergence-phoria relationship sufficient to prevent a break in fusion under conditions that may reasonably be expected to occur in performing airman duties. Tests for the factors named in this paragraph are not required except for persons found to have more than 1 prism diopter of hyperphoria, 6 prism diopters of esophoria, or 6 prism diopters of exophoria. If any of these values are exceeded, the Federal Air Surgeon may require the person to be examined by a qualified eye specialist to determine if there is bifoveal fixation and an adequate vergence-phoria relationship. However, if otherwise eligible, the person is issued a medical certificate pending the results of the examination.

§ 67.105 Ear, nose, throat, and equilibrium.

Ear, nose, throat, and equilibrium standards for a first-class airman medical certificate are:

(a) The person shall demonstrate acceptable hearing by at least one of the following tests:

(1) Demonstrate an ability to hear an average conversational voice in a quiet room, using both ears, at a distance of 6 feet from the examiner, with the back turned to the examiner.

(2) Demonstrate an acceptable understanding of speech as determined by audiometric speech discrimination testing to a score of at least 70 percent obtained in one ear or in a sound field environment.

(3) Provide acceptable results of pure tone audiometric testing of unaided hearing acuity according to the following table of worst acceptable thresholds, using the calibration standards of the American National Standards Institute, 1969 (11 West 42d Street, New York, NY 10036):

Frequency (Hz)	500 Hz	1000 Hz	2000 Hz	3000 Hz
Better ear (Db)	35	30	30	40
Poorer ear (Db)	35	50	50	60

(b) No disease or condition of the middle or internal ear, nose, oral cavity, pharynx, or larynx that—

(1) Interferes with, or is aggravated by, flying or may reasonably be expected to do so; or

(2) Interferes with, or may reasonably be expected to interfere with, clear and effective speech communication.

(c) No disease or condition manifested by, or that may reasonably be expected to be manifested by, vertigo or a disturbance of equilibrium.

§ 67.107 Mental.

Mental standards for a first-class airman medical certificate are:

(a) No established medical history or clinical diagnosis of any of the following:

(1) A **personality disorder (人格障害)** that is severe enough to have repeatedly manifested itself by overt acts.

(2) A psychosis. As used in this section, “**psychosis (精神疾患)**” refers to a mental disorder in which:

(i) The individual has manifested delusions, hallucinations, grossly bizarre or disorganized behavior, or other commonly accepted symptoms of this condition; or

(ii) The individual may reasonably be expected to manifest delusions, hallucinations, grossly bizarre or disorganized behavior, or other commonly accepted symptoms of this condition.

(3) A **bipolar disorder (躁うつ病)**.

(4) **Substance dependence (依存症)**, except where there is established clinical evidence, satisfactory to the Federal Air Surgeon, of recovery, including sustained total abstinence from the substance(s) for not less than the preceding 2 years. As used in this section—

(i) “Substance” includes: **Alcohol**; other **sedatives (鎮静剤)** and **hypnotics (睡眠薬)**; **anxiolytics (抗不安薬)**; **opioids (阿片)**; central nervous system stimulants such as **cocaine (コカイン)**, **amphetamines (アンフェタミン/中枢神経興奮剤)**, and similarly acting **sympathomimetics (交感神経刺激薬)**; **hallucinogens (幻覚剤)**; **phencyclidine (フェンクリジン/麻酔薬)** or similarly acting **arylcylohexylamines (アリアルジアゾニウム塩)**; **cannabis (大麻)**; **inhalants (吸入抗原)**; and other **psychoactive drugs (抗精神薬)** and **chemicals**; and

(ii) “Substance dependence” means a condition in which a person is dependent on a substance, **other than tobacco** or ordinary **xanthine-containing (e.g., caffeine) beverages**, as evidenced by—

(A) Increased tolerance;

(B) Manifestation of withdrawal symptoms;

(C) Impaired control of use; or

(D) Continued use despite damage to physical health or impairment of social, personal, or occupational functioning.

(b) No substance abuse (乱用) within the preceding 2 years defined as:

(1) **Use of a substance** in a situation in which that use was **physically hazardous**, if there has been at any other time an instance of the use of a substance also in a situation in which that use was physically hazardous;

(2) **A verified positive drug test result, an alcohol test result of 0.04 or greater alcohol concentration, or a refusal to submit to a drug or alcohol test** required by the U.S. Department of Transportation or an agency of the U.S. Department of Transportation; or

(3) **Misuse of a substance** that the Federal Air Surgeon, based on case history and appropriate, qualified medical judgment relating to the **substance** involved, finds—

(i) **Makes the person unable to safely perform the duties** or exercise the privileges of the airman certificate applied for or held; or

(ii) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to **make the person unable to perform those duties** or exercise those privileges.

(c) No other personality disorder, neurosis, or other mental condition that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds—

(1) **Makes the person unable to safely perform the duties** or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to **make the person unable to perform those duties** or exercise those privileges.

[Doc. No. 27940, 61 FR 11256, Mar. 19, 1996, as amended by Amdt. 67-19, 71 FR 35764, June 21, 2006]

§ 67.109 Neurologic (神経).

Neurologic standards for a first-class airman medical certificate are:

(a) No established medical history or clinical diagnosis of any of the following:

(1) **Epilepsy (癲癇);**

(2) **A disturbance of consciousness (意識障害)** without satisfactory medical explanation of the cause; or

(3) **A transient loss of control of nervous system function(s)** without satisfactory medical explanation of the cause.

(b) No other seizure disorder (発作性疾患), disturbance of consciousness (意識障害), or neurologic condition that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, **finds—**

- (1) **Makes the person unable to safely perform the duties** or exercise the privileges of the airman certificate applied for or held; or
- (2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to **make the person unable to perform those duties** or exercise those privileges.

§ 67.111 Cardiovascular(心臓血管).

Cardiovascular standards for a first-class airman medical certificate are:

(a) No established medical history or clinical diagnosis of any of the following:

- (1) **Myocardial infarction(心筋梗塞);**
- (2) **Angina pectoris(狭心症);**
- (3) **Coronary heart disease(冠状動脈性心臓病) that has required treatment** or, if untreated, that has been symptomatic or clinically significant;
- (4) **Cardiac valve replacement(心臓弁の交換);**
- (5) **Permanent cardiac pacemaker implantation; or**
- (6) **Heart replacement;**

(b) A person applying for first-class medical certification must demonstrate an absence of myocardial infarction(心筋梗塞) and other clinically significant abnormality on electrocardiographic examination:

- (1) **At the first application after reaching the 35th birthday; and**
- (2) **On an annual basis after reaching the 40th birthday.**

(c) An electrocardiogram(心電図) will satisfy a requirement of paragraph (b) of this section if it is dated no earlier than 60 days before the date of the application it is to accompany and was performed and transmitted according to acceptable standards and techniques.

§ 67.113 General medical condition.

The general medical standards for a first-class airman medical certificate are:

(a) No established medical history or clinical diagnosis of diabetes mellitus (糖尿病) that requires insulin or any other hypoglycemic drug (低血糖症の薬) for control.

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, **finds—**

(1) **Makes the person unable to safely perform the duties** or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to **make the person unable to perform those duties** or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, **finds—**

(1) **Makes the person unable to safely perform the duties** or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to **make the person unable to perform those** duties or exercise those privileges
